

Look Who's Going Green

with Eemax Tankless Water Heaters

You might be wondering what Hershey's Chocolate World, Japanese Railways Group, and Green Mountain Coffee have in common? The answer is not obvious – but simply put – they are all improving their "greenness" by choosing energy-saving electric tankless water heaters from Eemax.

Top Companies Turn Tankless

In today's high-demand, fast-paced environments, time is of the essence, and companies are searching for quick and easy ways to conserve energy while keeping costs at a minimum. Eemax Electric Tankless Water Heaters are the perfect energy-saving, inexpensive solution for new construction and for green building renovations.

On-demand water heating is one of the most effective ways to conserve energy. Top companies like Hershey's, Japan Railway Group, and Green Mountain Coffee will achieve higher levels of greenness with the use of 99% energy efficient Eemax Electric Tankless Water Heaters.

In production facilities like Hershey's and Green Mountain Coffee where food products are being handled, sanitation and safety is of utmost importance. Now with Eemax Tankless Hot Water Heaters, hot water arrives instantly at the point-of-use. There is no wasted water down the drain. Continuous hot water flow means employees will never run out of hot water.

Today's companies will also enjoy huge savings on utility bills because with a tankless system, there is no need to heat water 24/7 or on weekends, holidays, or factory shut-down periods.

And how about wasting time waiting for water to warm up? Passengers on Japan's bullet trains are traveling at nearly 170mph. They are accustomed to high-speed movement. Wouldn't it be a contradiction to have to stand by and wait for water to heat up in train lavatories? The wait is eliminated with on-demand hot water delivered through Eemax Electric Tankless Water Heaters. Their compact design allows for installation virtually anywhere. Even on bullet trains!

Eemax Model EX80TML being installed at Hershey's Chocolate World facility in Pennsylvania.

NEVER RUN OUT OF HOT WATER AGAIN...
